Hoffman's Study Guide #1 NBCT Exceptional Needs Specialist- Early Childhood through Young Adulthood- Mild/Moderate Disabilities (ages 5-21+),

Study online at https://quizlet.com/_cvq1w5

1.	Court case required that children with disabilities must be provided a free and appropriate education without exception.	Timothy vs. Rochester School District (1989)
2.	Federal law designed to protect the rights of individuals with disabilities; prohibits discrimination in education, employment, and community settings.	Rehabilitation Act of 1973, Section 504
3.	Law ensuring services to children with disabilities; children with disabilities should have the opportunity to receive a free and appropriate education public education, just like other children.	Education for All Handicapped Children Act (Renamed Individuals with Disabilities Act (IDEA, 2004))
4.	1. Zero Reject 2. Protection in the evaluation process (non-bias testing) 3. Free and Appropriate Public Education (FAPE) 4. Least Restrictive Environment (LRE) 5. Due Process Procedures (Procedural Safeguards) 6. Parent and Student Participation (shared decision making)	Six Major Principles of IDEA
5.	1. To ensure all children with disabilities are guaranteed a free and appropriate public education (FAPE) 2. To assist states in establishing early intervention services for infants and toddlers with disabilities. 3. To ensure that educators and parents have the necessary tools to improve the education for all children with disabilities.	Four Key Purposes of IDEA

	4. To assess the effectiveness of the education for children with disabilities.	
6.	No child with a disability may be excluded from a public education.	Zero Reject
7.	The education of students with disabilities must be at the public expense based on the development of an IEP that includes related services.	Free and Appropriate Public Education (FAPE)
8.	Based on Section 504, it extends civil rights to individuals with disabilities in prior sector employment, public services, public accommodations, transportation, and telecommunication. These employment and public services must accommodate persons with disabilities in an appropriate and nondiscriminatory manner.	ADA (Americans with Disabilities Act 1990)
9.	Case upheld that each child with a disability has a right to an individualized program and supportive services deemed appropriate and necessary.	Board of Edu of the Hudson School District v. Rowley 1982
10.	Case ruled that IQ tests could not be used as the primary or sole basis of playing students in special programs.	Larry P. vs. Riles
11.	Case established the right for all children with mental retardation to a free public education.	Pennsylvania Association for Retarded Citizens v. The Commonwealth of Pennsylvania 1972
12.	Case determined the tracking system for regular and special education students based on intelligence	Hobson v. Hanson 1967

	scores was unconstitutional for some populations of students and could not be used.	
13.	Case that determined that financial problems can not be a reason for the lack of appropriate programs for children with disabilities.	Mills v. Board of Edu 1972
14.	Ruled that students with disabilities may not be excluded for misbehavior that is disability-related, but services could cease if the behavior was not related to the disability.	Honig v. Doe 1988
15.	Case forced the school to provide non-physician required medical services to allow a physically impaired student to attend school.	Irving Independence School District v. Tatro 1984
16.	Ages 3-5	At what age are states mandated to implement services for children in early childhood settings?
17.	1. General Education Classroom 2. Resource Room 3. Self-Contained Program 4. Separate School	1. Inclusive and Consultative Model 2. Pulling and Integrated Model 3. Separate, Segregated Model 4. Private Setting
18.	Makes changes in how the student accesses the environment or in instructional delivery.	Adaptations
19.		Modification

	This includes actual changes made to the curriculum, to the environment, or to expectation of the instructional task in order to meet the student's specific needs. This is often imposed when the task is above the student's ability level, so the reduce the expectations or content to support the severity or type of disability.	
20.	The concept that everything in the environment in learning and in products, should be accessible to everyone.	Universal Design
21.	Birth-2 years	Under IDEA, what age group is qualified to receive early intervention services?
22.	Any item, piece of equipment, or product system, whether acquired commercially off the shelf, modified, or customized, which is used to increase, maintain, or improve the functional capabilities of children with disabilities.	Assistive Technology
23.	1. Pre-Referral 2. Screening 3. Referral 4. Evaluation and Identification 5. Instructional Program Planning 6. Placement 7. Review and Evaluation	What are the 7 steps of the assessment process?
24.		

	The process of gathering information about problem behaviors of an individual student, used to evaluate the need for behavior intervention and a behavior plan.	Functional Behavior Assessment (FBA)
25.	Analyzing behavior to determine how and why students respond to certain events, situations, or the environment; allows for the training of rewards and reinforcements to help the student learn the target behavior.	ABA (Applied Behavior Analysis)
26.	Ordered schools to provide extended school year services for students with disabilities who may regress over long periods without attending formal school programs.	Armstrong v. Kline (1979)
27.	The extent that a previously learned behavior continues after the intervention to support it has ended.	Maintenance
28.	Ruled that medical services necessary to a student with a disability to access and benefit from special education must be provided by the school as long as the service does not require a physician.	Cedar Rapids v. Garrett F. (1999)
29.	When a behavior continues repeatedly beyond the typical endpoint and the student demonstrates difficulty switching tasks.	Perseveration
30.	Knowledge of successful and appropriate language use, such as in conversation	Pragmatics
31.	The use of semantic and syntactic clues to aid in completing sentences.	Cloze Procedure

32.	Behavior modification method used in which the student is motivated to use a desired behavior in order to avoid a negative consequence.	Negative Reinforcement
33.	The ability to use skills learned across various settings.	Generalization
34.	A strategy for helping a student and eventually fading out the support as he or she gains mastery.	Contingent Teaching
35.	Instruction using real-world projects and activities to allow students to discover and explore in a more relevant manner.	Authentic Learning
36.	Adjective describing the perception of body position and movement.	Vestibular
37.	Court held that IDEA allows reimbursement for private special education services even when the child did not previously receive special education from the public school.	Forest Grove School District v. T.A. (2009)
38.	A technique in which student performance is reinforced so that the student will continue to perform more complex tasks in the sequence.	Chaining
39.	Meaning that language communicates that governs vocabulary development.	Semantics
40.	Affirmed that public schools are not obligated to provide special education services if parents CHOOSE to place their child in a private school.	Foley v. Special School District of St. Louis County (1998)

41.	The degree to which a behavior is repeated.	Intensity
42.	An approach that identifies the skills to be taught and uses direct daily measure of the student's performance to acquire the skills.	Precision Teaching
43.	The focus is on the student as an active and involved learner who constructs knowledge by using previously learned information.	Implicit Instruction
44.	A written statement for each child with disability that details in-depth a child's disability and the reasons for why the child may need extra assistance, as well as annual goals for the student and a plan using available resources to achieve these goals.	Individualized Education Program
45.	Provides age appropriate activities that are discovery-based and interactive, such as Developmentally Appropriate Practices (DAP).	Cognitive-developmental curriculum
46.	Ruled that the training and education for a student with multiple disabilities, required in private residential placement, would be supported through district funds.	Abrahamson v. Hershman (1983)
47.	Behavior modification method in which the student is motivated to use a desired behavior because of the reward to be obtained.	Positive Reinforcement
48.	Free and Appropriate Education Least Restrictive Environment Behavior Intervention Plans	FAPE LRE BIP

	Individualized Transition Plan Individual Family Service Plan	ITP IFSP
49.	Application of a learned behavior or skill to another setting.	Response Generalization
50.	How muscles coordinate movements with the information received through the environment by the senses.	Perceptual Motor
51.	A systematic approach of teaching with specific goals, active learner engagement, and positive reinforcement for student performance.	Direct Instruction
52.	The ability of students to demonstrate concept knowledge by applying the information to other settings without prompts from the teacher.	Concept Generalization
53.	Provides drill and practice for students who have problems with basic skill areas and with motivation issues.	Instructional Technology
54.	Individualizing instruction to develop strengths and remediate weaknesses.	Diagnostic-Prescriptive Method
55.	Providing instructional prompts to aid in correct responses.	Transfer of Stimulus Control
56.	Providing positive reinforcement and confirmation to improve learning.	Systematic Feedback
57.		Arlington Central School District Board of Ed v.

	Supreme Court ruled that prevailing parents are not entitled to recover fees for services rendered by experts in IDEA actions.	Pearl and Theodore Murphy (2006)
58.	Stimulus used in behavior management and behavior modification that occurs prior to the behavior and establishes the reason for the behavior.	Antecedent
59.	Determined that parents may request their children's interest in special education cases and are not required to hire an attorney.	Winkleman v. Parma City School District (2007)
60.	Merged the federal office of Gifted and Talented with other federal programs and states; received block grants to determine which programs and students to support.	Education Consultation Act (1982)
61.	Ruled to support a family preference to educate a child with mental retardation in the general education classroom.	Oberti v. Board of Education (1993)
62.	Supports students with disabilities who have oral language problems.	Augmentative technology
63.	Replaces the keyboard and the input device	Voice Recognition System
64.	A type of communication in which a person provides assistance to a student by pointing to symbols or letters.	Facilitated Communication
65.	Evaluation tool that lists specific observable behaviors to assess the severity, frequency, and type of exhibited behaviors completed by staff, parents, or students.	Behavior Rating Scales

66.	Ruled home bound instruction for a student with multiple health problems did not comply with the LRE and required the student be placed in a class with non-disabled children and receive the necessary related medical services.	Department of Education v. Katherine D. (1984)
67.	The unconscious perception of movement and spatial position from stimuli within the body itself.	Preprioception
68.	Concentrates on levels of adequate communication and language that a person needs to live independently in the community.	Functional Literacy
69.	Instills skills used to make a basic need or desire known	Functional Language
70.	Ability to communicate thoughts, feelings, and ideas through words, gestures, sign systems, assistive devices, etc.	Expressive Language
71.	Team review of the relationship between the student's inappropriate behavior and the disability, required under IDEA when a student violates a code of conduct.	Manifestation Determination
72.	Written agreement between the student and teacher that outlines the expected performance and the consequences and reinforcers used.	Contingency Contract
73.	A law that makes available a free appropriate public education to eligible children with disabilities throughout the nation and ensures special education and related services to those children.	Individuals with Disabilities Education Act (IDEA)

74.	An educational right of all children in the United States that is guaranteed by the Rehabilitation Act of 1973 and the Individuals with Disabilities Education Act (IDEA).	Free Appropriate Public Education (FAPE)
75.	A civil rights law of 1990 that prohibits discrimination against individuals with disabilities in all areas of public life, including jobs, schools, transportation, and all public and private places that are open to the general public.	Americans with Disabilities Act (ADA)
76.	Under this act it is required that all students receive a Free and Appropriate Public Education (FAPE), and includes that these students should be educated in the least restrictive environment (LRE).	Least Restrictive Environment (LRE)
77.	A section of the Individualized Education Program (IEP) that outlines transition goals and services for the student. The transition plan is based on a high school student's individual needs, strengths, skills, and interests.	Transition Plans
78.	A SPED Law that applies when a parent disputes a change the school wants to make to their child's IEP. By using that right, the parent's child can remain in his/her current placement until the parent and the school resolve the dispute.	Stay Put Rights
79.	Before your child can become eligible to receive special education services, the school is required by law to determine the child's specific needs. The school	10-Day Cycle

	determines these needs through a process consisting of many steps, often termed the "Special Education Cycle." The process must be completed within 10 days.	
80.	Under "special circumstances" involving weapons, drugs, or serious bodily injury, the IDEA allows school personnel to remove a child with a disability to an interim alternative educational setting (IAES) for not more than 45 school days regardless of whether the behavior is determined to be a manifestation of the child's disability.	Weapons and Drugs
81.	A law protected under the Individuals with Disabilities Education Act, (IDEA), and provides parents with the right to resolve disputes with your school district. There are two ways to resolve disputes, mediation and through a due process hearing.	Due Process
82.	In implementing education reform initiatives, public schools and school systems must abide by Section 504 of the Rehabilitation Act of 1973 (Section 504) and Title II of the Americans with Disabilities Act (ADA) which prohibit discrimination on the basis of disability.	Section 504 (of ADA)
83.	Teachers create realistic, age- and developmentally appropriate activities and materials for individual learners that embody significant problem-solving and real-world applications.	Stages of human development and learning
84.	A law passed in 1965 as a part of United States President Lyndon B. Johnson's "War on Poverty" and has been the most far-reaching federal legislation affect-	Elementary and Secondary Education Act

	ing education ever passed by the United States Congress.	
85.	How do students learn to read	Decode, comprehend, analyze, and evaluate text.
86.	Foundation number system, using patterns to make generalizations, and developing mathematical understandings as well as the central concepts and principals of important mathematical domains.	Numeracy
87.	An approach that schools can use to improve school safety and promote positive behavior. It's also a way for schools to decide how to respond to a child who misbehaves.	Positive Behavior Interventions (PBIS)
88.	To promote positive behaviors, teachers actively collaborate with others who serve their students across varied settings, welcoming the contributions of and facilitating communication among colleagues and resources.	Behavior Interventions
89.	An assessment to can help figure out the cause of problem behaviors.	Functional Behavior Assessment (FBA)
90.	A plan that can help prevent behavior problems by addressing their cause.	Behavior Intervention Plan (BIP)
91.	Behavior Intervention Case Manager	BICM
92.	A concept reflecting the belief that all individuals have the right to direct their own lives. Students who have these skills have a stronger chance of being successful	Self-determination

in making the transition to adulthood, including employment and independence.

93. Bloom's Taxonomy

The learning objectives in cognitive, affective and sensory domains. The cognitive domain list has been the primary focus of most traditional education and is frequently used to structure curriculum learning objectives, assessments and activities.

94. Numeracy Question Rubric

1. Describe student & skill needed to be addressed.
2. Two instructional activities & two instructional resources.
3. How teacher will evaluate the student's success.

95. Children whose physical attributes and/or learning abilities differ from the norm, to such an extent that an IEP is needed

Exceptional Children

96. Reduced functioning or loss of a particular body part or organ

Impairment

97. Problems a person with a disability or an impairment encounters when interacting with the enviroment

Handicap

98.	Not currently identified as having a disability but is considered to have a greater than usual chance of developing a disability if intervention is not provided.	At risk
99.	Percentage of school- age children receieving special education services	9%
100.	Percentage of students with disabilities served at least in part in regular education classrooms	75%
101.	Supreme court ruled that education must be available to all children on equal terms	Brown v. Board of Education
102.	PL 94-142, law regarding the education of children with disabilites	Individuals with Disabilities Act(IDEA)
103.	Part of IDEA, all children must receive a free, appropriate public education at public expense	Free and appropriate education(FAPE)
104.	Part of IDEA, schools must educate all children with disabilities, regardless of the nature or severity of the disability	Zero reject
105.	Part of IDEA, students with disabilities must be educated with their non-disabled peers to the maximum extent appropriate	Least restrictive enviroment(LRE)
106.	Part of IDEA, schools must collaborate with parents and with students with disabilities in the design and implementation of special education services.	Shared decision making
107.		Due process

	Part of IDEA, schools must protect the rights of students with disabilities	
108.	Part of IDEA, schools must use nonbiased, multifactored methods of evaluation to determine whether a child has a disability, and if so whether special education is needed	Nondiscriminatory identification and evaluation
109.	Intervening to keep potential or minor problems from becoming a disability	Preventitive
110.	Eliminating the effects of the disability through instruction	Remedial
111.	Teaching the use of skills or devices that enable successful functioning in spite of the disability	Compensatory
112.	Part of the reauthorization of IDEA (97), determining if a behavior problem is the result of a disability	Manifestation determination
113.	Special transportation, counseling, speech, physical, or occupational therapy required to meet the student's IEP goals	Related Services
114.	Devices such as visual aids, augumentative communication boards, special equipment, or computers	Assistive Technology
115.	A written, legal, document that specifies the student's short and long term educational goals, learning enviroment(s), and related services	Individualized Education Plan(IEP)
116.	All interested parties that develop and IEP	Transdiciplinary team

117.	Breaking down complex or multiple step behaviors or skills into small, easier to teach subtasks.	Task analysis
118.	An observable student response made to an instructional antecedent	Active Student Responding(ASR)
119.	Immediate, affirmative feedback for correct and/or appropriate behavior that serves to increase the likelihood that the behavior will occur again in the future	Positive reinforcement
120.	An instructional antecedent, a student's response, and positive or corrective instructional information	Learning Trial
121.	The extent to which students extend what they learn across settings and over time	Generalization and maintenance
122.	A disorder in one or more of the basic psychological process involved in understanding or in using language, spoken or written, which may manifest itself in an imperfect ability to listen, think,speak,write,spell, or do mathematical calculations	Learning Disabilities(LD)
123.	The inability to accurately and fluently decode written text	Dyslexia
124.	A standardized achievement test that measures one students scores on the test to other children of the same age who have taken the same test	Norm- Referenced text
125.	A test that measures achievement according to a predetermined standard	Criterion Referenced Tests
126.		

	The frequent assessment of a student's progress in learning the objectives that make up the actual curriculm in which the student is participating	Curriculum based measurement
127.	Carefully designed materials and activities that provide structures and supports that enable students to make sense of new information and concepts	Explicit instruction
128.	Behavioral or emotional responses in school programs so diffrent from appropriate age, cultural, or ethnic norms that they adversely affect educational performance	Emotional or behavioral disorder
129.	Behavior that falls significantly outside the norm that is characterized as withdrawn, fearful, or depressive	Internalizing behaviors
130.	Behavior that falls significantly outside the norm that is characterized as aggressive, abusive, or disruptive	Externalizing behaviors
131.	A developmental disability characherized by sterotypic repetitive behavior, resistance to enviromental change, and unusual responses to sensory experience	Autism
132.	A systematic approach to teaching based on scientifically demonstrated principle that describe how the enviroment affects learning	Applied behavior analysis
133.	Using the findings of assessment data(i.e., functional assessment) to construct a comprehensive, individualized program of interventions	Positive behavioral support
134.	A problem with the transmission and reception of speech, language and/ or communication	Communication disorder

135.	The inability to use hearing to understand speech	Deaf
136.	A significant loss of hearing that makes some special adaptions necessary	Hard of hearing
137.	A person whose visual acuity is 20/200 or less in both eyes	Blind
138.	An impairment in vision that, even with correction, adversely affects a child's educational performance	Visual impairment
139.	A disorder of voluntary motor function resulting from a lession to the brain or abnormality of brain growth. Characterized by paralysis, extreme weakness, lack of coordination, involuntary convulsions, and other motor disorders	Cerebral Palsy(CP)
140.	IEP component for students with special health care needs; specifies health care procedures and services administered by school personallel and a plan for emergencies	Individualized health care plan(IHCP)
141.	A group of inherited disorders marked by progressive atrophy of the body's muscles	Muscular dystrophy(MD)
142.	A term for a congenital defect in the vertebrae that enclose the spinal cord	Spina Bifida
143.	Chronic abnormal electrochemical activity of the brain that causes a person to lose control of the muscles temporarily	Seizure Disorder(epilepsy)

144.	A term for students who need instruction in basic skills such as feeding, communication, and mobility	Severe Disability
145.	Limited active involvement in educational activities commensurate with a students's functioning level	Partial Participation
146.	Basic behaviors such as dressing, brushing teeth, etc that sometimes need to be taught to chilren with severe disabilities	Daily living skills
147.	A battery of behavioral assessments used for determining enviromental events that are setting the occasion for and maintaining challenging behavior	Functional assessment
148.	A term used for students who demonstrate or have the potential for demonstrating a high level of performance of academic skills, artistic achievement, or leadership qualities that neccesitate the need for special services	Gifted
149.	A wide variety of educational, nutritional, child care, and family support services, all designated to reduce the effects of disabilities or prevent the occurances of problems later in life	Early intervention
150.	Part of IDEA, a written document prescribing family focused early intervention services for the family of and young child who is at risk for or has a disability	Individualized family services plan(IFSP)
151.	Part of the reauthorization of IDEA(97). A written legal document with goals and objectives specifically developed to aid in the transition from school to vocational skills for exceptional children age 16 and above	Individualized transition plan(ITP)

152.	Individuals w/ Disabilities Education Act -went into effect on July 1, 2005 -enacted by Congress on November 19, 2004	IDEA
153.	Education for All Handicapped Children Act -enacted by Congress in 1975	Public Law 94-142
154.	School must obtain parental consent before conducting initial or re-evaluation. If parent does not consent, school may pursue a due process hearing against parent.	Parental Consent
155.	*this process changed w/ IDEA 2004 -school not required to re-eval more than 1x/yr -school must re-eval every 3 yrs unless school and parent agree it's unnecessary -school must re-eval if child's educational needs change or if a parent or teacher requests	Re-evaluations
156.	*must assess child in all areas of suspected disability -school must use variety of assessment tools to gather functional, developmental, and academic info -must not be racially/culturally biased	Evaluation Procedures
157.	Initial Evaluation	-Parents, state department of education, state agency, and school district staff may request an initial eval. -Initial eval and eligibility

		must be completed w/in 60 calendar days of receiving parental consent.
158.	1. Teachers are committed to students and their learning 2. Teachers know the subjects they teach and how to teach those subjects to students 3. Teachers are responsible for managing and monitoring student learning 4. Teachers think systematically about their practice and learn from experience 5. Teachers are members of learning communities	Five Core Propositions
159.	Knowledge of Students.	1. Standard 1
160.	i. Significant problem solving and real world applications ii. Review and rethink instructional strategies to accommodate range of abilities and developmental levels iii. Involve students in decision making iv. Collaborate with students to determine how personal goals can be measured and set timelines and benchmarks for achievement v. Design interventions that match each student's circumstances vi. Connections among physical, social, emotional, communicative and cognitive developmental stages (multiple intelligences?) vii. Multiple adaptations within the same lesson to of-	Teachers know how students grow and develop

	fer varied representations of information and engage a range of student abilities viii. Adapt instruction to suit changing circumstances ix. Students differ in the way they learn and thing x. Comprehend the importance of play to stimulate thinking and creativity while enhancing socialization.	
161.	i. Learning about students by observing them at work and play in a variety of settings and under a broad range of circumstances. ii. Alert to anything that contributes to a student's full participation. iii. Recognize subtle differences in a student's attitude, tone and enthusiasm iv. Prepare students for further education entry into the world of work, independent living and leadership v. Work with students and families to identify student strengths and needs vi. Aware of the effects in students' lives like poverty, crime, divorce, drug use, unsafe communities, and families in difficult circumstances	Teachers are insightful observers of students
162.	i. Capitalize on student diversity to enrich the pursuit of academic, social and civic goals. ii. Take advantage of each student's cognitive, behavioral and physical knowledge iii. Students of a particular age, without regard to their background share many of the same interests, have had similar successes, face common challenges, and enjoy the same kinds of experiences and learning opportunities.	Teachers recognize and capitalize on student's diversity, commonalities, and talents

	iv. Benefit from efforts to develop their self-confidence.	
163.	i. Helping them to learn self-advocacy ii. Foster growth of networks of support and self-help to make student's school experience positive iii. Include: administrators, gen-ed teachers, paras, mentors, school counselors, therapists, psychologists, doctors, peers, and family, also community agencies, leisure providers, universities and local businesses	Teachers advocate for students
164.	Knowledge of Philosophy, History and Law	Standard 2
165.	i. Comply with the laws and understand advocacy role in safeguarding due proves rights of students and families in decisions about assessment, placement, instruction and transition ii. Everyone involved in educating student is informed of legal mandates that protect student and family rights iii. Teachers pursue creative options, such as collaborative partnerships with the community, universities and businesses iv. Advocate for student to have meaningful access to the general curriculum, appropriate learning opportunities and related activities. v. Collaborate with other professionals within the school (psychologist, counselor, social worker) vi. General educators and special educators collaborate	Teachers are effective advocates

166.	i. Reflecting on ethical dimensions of resources, instructional practices and relationships with students, families and other professionals. ii. Meticulous in controlling access to confidential information iii. Ensure that colleagues and families observe protocols of confidentiality.	Teachers exemplify high ethical ideals
167.	Diversity	Standard 3
168.	all students regardless of exceptionality, race, nationality, ethnicity, religion, language, culture, socio-economic status, sexual orientation, body image or gender receive equal opportunities to participate in, enjoy and benefit from needed services, instructional activities, learning experiences and resources.	Diversity
169.	i. Having high expectations that their students will treat one another fairly and with dignity ii. Promote and model the behavior necessary for a diverse society iii. [teachers] Conscientiously demonstrate in their own behaviors the kind of behavior they expect from students and others. iv. Create learning environments that value the dignity and worth of each individual. v. Help all students feel welcome as active contributors vi. Design instruction, materials, and curricula that reflect the diversity of learners and illuminate their significance in teaching and learning experiences.	a. Teachers create environments in which equity, fairness and diversity are modeled, taught and practiced.

	vii. All students receive appropriate attention and teacher assessments of student progress offer multiple avenues for success. viii. Actively and positively challenge those who express inappropriate perspectives on others teaching the importance of equality, fairness and respect. ix. Teachers appreciate the importance of helping others understand the nature and complexity of students with exceptionalities.	
170.	i. Teacher as aware of and responsive to family and cultural issues that affect beliefs, expectation and norms for behaviors ii. Respect the family's autonomy	Teacher respect the diversity of families
171.	i. Ensure that all students are appropriately and fairly given access to the high-quality programs and opportunities they need. ii. Make sure that accountability systems incorporate diverse learners with exceptionalities and include appropriate assessments, modifications and accommodations. iii. Sensitive to cultural, ethnic, gender, economic and linguistic differences that may be misinterpreted. iv. Ask questions, seek the assistance of other professionals and take actions to ensure the appropriate assessment and identification of students and to improve instructional services for them.	Teachers ensure access to quality learning experiences
172.	Family Partnerships	Standard 4
173.		Family Partnerships

	view parents, guardians and other caregivers are partners in a productive dialogue to benefit students, regard collaboration with families as necessary. Teachers serve as a resource for families and provide them with a wide range of information and support to help them become significant partners in educating their children.	
174.	i. Recognize that families are insightful observers and reporters of their children's strengths and needs. ii. Families have a crucial and continuing influence on their children's development and on their attitudes towards school, learning and work. iii. Know how to engage families appropriately and effectively in their children's educational programs and collaborate with them to promote growth iv. Significant benefits accrue from regular interactions with families v. Treat families with sensitivity and respect and respond thoughtfully and thoroughly to family concerns and needs.	Teacher gain insight about students through partnerships with families
175.	i. Seek family input to complement, enrich and expand student learning. ii. As necessary, teachers collaborate with families to help students set goals, develop effective learning habits and study positive social relationships with peers and others to improve performance. iii. Sensitive to varied families roles and structures and understand the diverse circumstances in which students live.	Teachers collaborate with families to support students' education

176.	i. Knowledgeable about programs and materials for parent education and support that provide resources families can use to extend and compliment school based learning activities, such as family support groups, vocational rehab, counseling and mental health services.	Teachers serves as links in family resource networks
177.	Assessment	Standard 5
178.	i. View assessment as a tool for measuring progress, defining realistic goals, determining appropriate placement options and helping students understand their strengths and needs. ii. Emphasis on student growth requires the knowledge and use of a wide range of assessments iii. establish the students' baseline performance iv. recognize assessment instruments and procedures serve different purposes v. use the appropriate data when making decisions regarding students vi. adeptly use multiple evaluation methods vii. develop informal assessment tools (journals, portfolios, demonstrations, exhibitions and oral presentations. viii. Clear and succinct criteria for instructional goals enabling students to understand norms ix. Help students judge their own work x. Encourage students to advocate for themselves in identifying and securing modifications and accommodations xi. Acknowledge the limitations of certain evaluative	Teachers use diverse assessment methods for a variety of purposes

	instruments that may reflect cultural or economic bias xii. Measure student progress when students move from one instructional environment to another to determine whether the settings support student achievement.	
179.	i. Receive, analyze and interpret assessment data from numerous sources ii. Work collaboratively with full range of school personnel and other professional colleagues on issues of student assessment to ensure that students with exceptionalities access curriculum and achieve success iii. Aware of accommodations available for assessments in various contexts iv. Familiar with benefits and limitations of different instruments and procedures. v. Welcome and include students and families in assessment process.	Teachers collaborate in the assessment process
180.	Communication	Standard 6
181.	i. Know that students acquire language through exchange of meaningful messages ii. Provide students with multiple opportunities to practice language with one another and in the community iii. Understand that for students to succeed in language learning, instructional contexts must be significant to students who benefit when they see themselves as partners in language acquisition.	Teachers understand language acquisition and development

iv. Students needs guide effective language learning (which occurs when students perceive the personal importance of instruction)
v. Understand language variations and speech language disabilities and that making mistakes is an integral part of acquisition
vi. Support invented spelling in early writing
vii. Provide students with messages that are scaffolded so that learners can extract meaning from them. Appropriate complexity (graphic organizers, visual representations, and concrete objects to clarify)
viii. Observe student progress in developing language and literacy skills, determine what students need to learn next and design special interventions as necessary.
ix. Identify communication delays, disorders and differences and respond to them as they occur
x. Consider a range of language learning issues such as exposure to prior curriculum cognitive and learning characteristics and academic and experimental backgrounds
xi. The need to differentiate between communication needs based on language or dialectical differences and those that are exceptionality based.
xii. Recognize challenges faced by students who do not speak English as a first language
xiii. Sensitive to cultural influences n communication related to student learning, both academically and socially.
xiv. All behavior is a form of communication and inappropriate behavior is often a response to communica-

tion breakdown
xv. Differentiate between aspects of students' communication that require language related interventions and those that require behavior based interventions
xvi. Understand students' behavior in relation to their communication skills and introduce strategies that enable students to gain insight into their behavior to relieve their frustrations in constructive ways.

182. i. Use learning strategies appropriate to the language development levels and communication needs of all students
ii. Students with moderate to severe communication disorders
1. Know that for students to be proficient in their chosen mode of communication, it must be understandable with many different partners in several environments.
2. Innovative in addressing students' communication difficulties and design meaningful, developmentally appropriate language learning context tailored to students' needs.
3. Employ strategies and methods to enable each student to learn and use both receptive and expressive communication skills
4. Recognize that functional communication skills are essential for students with moderate-severe communication disorders, so they include in their language arts instruction a special focus on functional reading and writing

Teachers use unique strategies to develop communication skills

183.	i. Understand that language development is a shared responsibility of all who provide services to students with exceptional needs, so they collaborate	Teachers collaborate with general educators, related service providers, and others to facilitate student language development
184.	Social Development and Behavior	Standard 7
185.	i. Recognize that social interaction is crucial to communicative, cognitive and affective development and that social skills contribute to successful learning in groups. ii. Establish or contribute to classroom climates in which both verbal and non-verbal communication enhance social interactions and the development of social skills. iii. Provide instruction in coping skills that provide students opportunities to resolve problems effectively, learn to exercise self-control, understand their motivations and reactions, manage themselves and their emotions in a variety of settings, develop a sense of social responsibility by taking actions to support the common good and appreciate and respect others' viewpoints. iv. Encourage sensitivity to both verbal and non-verbal communication.	Teachers teach and foster skills
186.	i. Work actively to develop in students an intrinsic sense of their own significance, power and competence ii. Help students focus on positive self-concepts	Teachers develop students self-confidence and self-determination

iii. Providing opportunities for students to be challenged at their appropriate levels and to experience success thereby advancing independence and a sense of personal accomplishment
iv. Discover ways to motivate non-engaged students and lead them to understand the benefits of active learning and the relationship between academic involvement and the ability to achieve future goals.
v. Students participate directly in their own educational experience
vi. Teach students to self-advocate

187. i. Nurture students in understanding democratic values, including concern for the rights of others locally and globally.
ii. Inspire students to become aware of how they relate to family members, peers, their community, their country and the world
iii. Understand and use the principles of freedom, justice and equity and to recognize and work against discrimination, prejudice and stereotyping.
iv. By example and through class activities and discussions, encourage positive character traits including honesty, tolerance, loyalty, responsibility and perseverance
v. Mutual respect is a vital component in fostering tolerance and positive behavior
vi. Involve students in rule-making and decision making.

Teachers encourage the development of social and ethical principles

188.

	i. Student behavior is a function of the complex interaction among numerous factors- student exceptionality, developmental level, previous experiences, home environment and communication skills. ii. Use intervention plans, behavior contracts, visual aids and verbal reminders iii. Analyze and interpret behavior across contexts, employ FBA and develop BIP in collaboration with students, families and professional colleagues to help students understand, predict and modify their conduct. iv. Plans align with goals and objectives, incorporate short and long-term goals regarding behavior, reward positive behavior, identify consequences v. Identify and head off antecedents, teach and reinforce replacement behaviors, and think about different ways of responding. vi. Collaborate and maintain confidentiality (conform that behavior goals are approved, understood and upheld by all those involved with student)	Teachers foster and support positive behavior
189.	i. Distinguish between behaviors that require PBIS and those that require BIP ii. Abide by due process iii. Evidence-based intervention iv. Preserve students' dignity v. Anticipate what may provoke crises or conflicts and know how to prevent or intervene vi. Use crises to teach appropriate behaviors vii. Remain calm in crisis situation. Primary goal	Teachers maintain safe and secure environments for all students

	throughout is to return students to an active and secure learning environment.	
190.	Curriculum and Instruction	Standard 8
191.	consider the whole student. Knowledge of federal regulations, state standards the general education curriculum, and a range of curricular accommodations and modifications specific to students with exceptionalities. Use expanded curriculum (socio-emotional skills, life skills, health and leisure education, transition, career development etc.) Know that students do not all achieve the same goal and the same time, they do not follow the same path to success.	Curriculum and Instruction
192.	i. Recognize that building competence in the ideas, themes, concepts and facts comprising the core curriculum is an essential foundation that all students need ii. Integrate literacy and numeracy across curriculums 1. Literacy a. Create rich environments for developing literacy skills by linking what students already know and are curious about with instruction b. Developing language skills includes the ability to reflect on language, the development of a rich vocabulary and the ability to communicate and understand complex thoughts c. Structure learning opportunities to take advantage of students' prior literacy experiences	Teachers are grounded in the academic core curriculum

d. Know how to help students to listen and speak to share their ideas and feelings
e. Know that listening involves receiving, understanding, analyzing, evaluating and reacting to sounds and messages
f. Listening is vital to communication and learning
g. Know how students learn to read and design appropriate instruction
h. Writing entails complex and challenging processes which are rarely linear
i. Familiar with the conventions of good writing
j. The best writing occurs in meaningful contexts
k. Visual communication is vital to achieving literacy in contemporary society
l. Use knowledge of language and literacy development to address students' needs along a continuum of increasing complexity.
2. Numeracy
a. Know the foundations of the number system and the importance of using patterns to make generalizations and develop mathematical understandings
b. Mathematical thinking, exploration, representation, modeling, conjecture, inference, interpretation, analysis in addition to the importance of proof and formal reasoning.
c. Open ended work/discussions
d. Select and create a variety of resources (manipulatives, textbooks, charts, newspapers, calculators, computer software, puzzles and games)
e. Arrange for students to work together.
f. Encourage students to investigate alternative strate-

gies and creative solutions
g. Challenge students to generate their own solutions which they must defend
h. Apply numeracy concepts to home environments
i. Routinely integrate math across curriculums
j. Design instruction to meet students' needs while deepening understanding and disposition toward numeracy and math
k. Foster abstract thinking and ability to communicate mathematically

193. 1. Recognize that general education curriculum nay not meet all the needs of students with exceptional needs
2. Include curricula that address social and emotional development
3. Individualize curriculum
ii. Importance of social interaction
1. Effective social interactions are essential to academic success
2. Teachers recognize that physical, intellectual, ethical and social development are interdependent and exceptionalities often affect each of these domains.
iii. Life skills important for independent functioning
1. Knowledgeable in complex curriculum of life skills
2. Life skills curriculum is equal in value to academic curriculum
3. Seamlessly blend the curriculum of daily living skills into meaningful contexts
4. Begin with high expectations to help students develop self-determination

Teachers expand the core curriculum to ensure the success of students with exceptional needs

5. Recognize the personal nature of providing services to meet individual needs of students.
6. Teach students self-monitoring strategies
iv. Health, physical education and leisure
1. Focusing on student's physical, mental and social well-being
2. Understand the foundations of good health
3. Help students understand he dangers of diseases and the benefits of healthful lifestyle
4. Plan, organize and carry out programs in health education
5. Familiar with principles of motor development and exercise science and understand how to apply this knowledge in developing physical education activities appropriate for students with exceptionalities.
6. Appropriate and stimulating play activities and interests sharpen students' mental and psychical skills, build self-confidence and improve interactions with others.
7. Assist students in mastering concepts and skills to enable them to participate fully and achieve long-term independence.

194. 1. Knowledgeable about multiple, significant, transition points in the life of a child
2. Sensitive to the concerns of families and the changing relationships that occur at each level
3. Communicate with families and support their participation in transition planning
4. Understand the central importance of transition planning as a unifying framework to identify students'

c. Student Transitions and Career Development

post-secondary goals
i. Transition in the Early Years
a. Transition is a progressive developmental process toward adult independence that begins during children's early years.
b. Recognize differences between transition in early years and middle high school years and high school years.
ii. Transition to middle years and young adulthood
1. Knowledge of students' post-secondary plans
2. Design programs of study that provide choices and diverse opportunities
3. Focus career-technical instruction on functional work skills, such as excellent attendance, managing time, dressing appropriately, working productively with coworkers, interacting appropriately with customers and supervisors and getting to and from jobs safely and on time
4. Imbue the broader curriculum with self-advocacy and self-determination curricular elements in a variety of ways.

195. i. Engage all students with exceptionalities at appropriate developmental levels.
ii. Flexible in setting expectations, designating goals, adjusting curriculum, seeking new resources, determining instructional strategies and teaching methods, structuring activities and designing assessments.
iii. Prepare students for success in many endeavors by developing their capacity for critical thought.

Teachers differentiate instruction based on students' strengths and Needs

iv. Involve students in learning activities and tasks designed to strengthen their cognitive skills
v. Plan for instruction that deepens and becomes more challenging as students develop, gain skills and mature
vi. Introduce multi-sensory activities to stimulate abstract, creative thinking and inspire students to combine ideas, themes and knowledge from various subject areas.
vii. Engage students in inquiry-based activities that appeal to students' varied knowledge, interests, experiences and skills and involve issues and questions often approached from cross-disciplinary viewpoints.
viii. Differentiate instruction and implement modifications and accommodations to meet the needs of individual students and create learning situations in which students feel safe to explore various approaches and response formats.
ix. Provide accommodations for students, such as extending time to complete tasks or having students answer questions orally or by using a computer
x. Respond to the diverse needs and characteristics of the students.
xi. Provide access to technology so students can communicate with others. Participate meaningfully in a wide range of activities and expand their learning.

196. i. Recognize that general education curriculum may not meet all the needs of students with exceptional needs
ii. Include curricula that address social and emotional

Teachers expand the core curriculum to ensure the success of students with exceptional needs

	development iii. Individualize curriculum	
197.	i. Effective social interactions are essential to academic success ii. Teacher recognize that physical, intellectual, ethical and social development are interdependent and exceptionalities often affect each of these domains.	Importance of social interaction
198.	Learning Environment	Standard 9
199.	i. Create and support positive learning environments that are intellectually, physically, and emotionally safe, where students actively participate, take chances, explore alternatives, challenge assumptions and feel comfortable with themselves ii. Take an interest in students' lives, idea and activities and fashion an atmosphere where students feel welcomed, valued, respected and stimulated. Where they can develop socially academically and intellectually. iii. Students benefit from the security and safety of structured and supportive settings iv. Learning environments often encompass the entire school, including general education and special education rooms, hallways, cafeterias, outdoor areas and community work settings v. Analyze and manage learning environments to promote student success.	Teachers establish safe and positive learning environments
200.	i. Foster a sense of community, independence and caring ii. Apply principles of fairness in a sensitive manner,	Teachers value and support equity, fairness and student effort

	allocate time, learning opportunities and other resources fairly, wisely, and recognize competence effort and performance iii. Encourage innovation, creativity, independent inquiry and student engagement. iv. Respect for students' thoughts and judgments fosters self-confidence and individual dignity v. Instill in their students the ideas that learning is challenging that learning is challenging, that experimentation is essential and that recognizing and correcting mistakes are as important as celebrating successes. vi. Provide structure and routine with clear expectations and are productive, safe and predictable vii. Involve students in setting clear expectations for behaviors and they uphold these expectations fairly and consistently viii. Develop and discuss classroom rules, consequences, routines and behaviors for effective learning and therefore create a climate for working together ix. Actively pursue positive interactions among all students to demonstrate respect for others, encourage students to accept one another as capable individuals and promote support for all members of the school community.	
201.	Instructional Resources	Standard 10
202.	i. Understand that the lessons, materials, teaching strategies, assignments and assessment procedures must vary to meet learner needs	Instructional Resources

	ii. Seek to enrich and expand iii. Ensure access to general education curriculum iv. Research documenting the effectiveness of materials and practice and incorporate assessment data and their own evaluation of individual student progress to select and develop appropriate instructional interventions and materials v. Design and adapt materials to accommodate student strengths and respond directly to needs	
203.	i. Adept at devising and adhering to the often compacted schedules required to implement IEP and task plans with minimal disruption, complete paperwork and related tasks and carry out other professional duties despite the delivery of many different students at different times of the day. ii. Actively supervise and support paraprofessionals, volunteers and others who work alongside them, insightfully observing their work to strengthen their abilities to perform in educationally effective ways that supplement instruction and required services.	Teachers manage time and human resources productively
204.	i. Believe that with the proper mix of creativity, resources, instructional strategies and research ii. Get ideas from multiple sources, workshops, seminars, students, colleagues, families, community members and organizations iii. Incorporate instructional materials to help students generalize and make real-world connections iv. Many technologies have the potential for providing pathways for learning, communication and indepen-	Teachers select appropriate materials

	dence v. Know how to integrate current technology vi. Evaluate other materials and see what will work for their students	
205.	i. Enlist knowledge and expertise of colleagues and others to provide students with rewarding learning experiences. ii. View close collaboration with student's family as vital to students' success iii. Involvement varies with student's culture iv. Teachers are open to inquiries from parents related to selection, design, use and evaluation of instructional resources v. Invite colleagues to share specific expertise with students vi. Actively seek programs and individuals who can bring special knowledge and points of view to their students vii. See local community as an extension of the school.	Teachers partner with colleagues, families, and the community as important resources
206.	Contributing to the Profession and to Education through Collaboration	Standard 11
207.	i. Provide leadership through collaboration to improve teaching and learning for students with exceptional needs and to advance knowledge policy and practice ii. Regard collaboration as a distinguishing characteristic of their profession iii. Share responsibility and accountability for meeting complex needs of students with exceptional needs	Contributing to the Profession and to Education through Collaboration

	iv. Dedication to working with all service providers to benefit students and ensure their full participation and progress in all learning environments v. May include providing leadership on a variety of school teams vi. Focus collaborative relationships on ensuring student access to general education and to standards based education vii. Ensure student access to all learning environments and support student success by collaborating with colleagues and parents as students transition. viii. Collaborate in a variety of purposeful ways to influence school culture. \ ix. View cooperation with administrators as important to meeting needs of students with exceptionalities in regard to training and managing paraprofessionals.	
208.	i. Employ collaborative approaches to recognize and act on their professional responsibility to remain current with new knowledge in the broad arena of teaching and learning ii. Involve themselves in a variety of activities	Teachers participate in the profession
209.	i. Advocate for people with exceptional needs and help develop local, state and national policies related to issues, such as equity, accessibility, student assessment and teacher quality and retention.	Teachers contribute to the advancement of education policy and the profession
210.	Reflective Practice	Standard 12
211.	i. Regularly analyze, evaluate and synthesize their practice to strengthen quality	Reflective Practice

	ii. Lifelong learners who regularly and systematically examine their practice and use that knowledge to improve results for students iii. Continual reflection, incorporate promising new concepts, strategies, approaches, programs and materials	
212.	i. Continually challenge beliefs about effective educational practice ii. Regularly reflect and evaluate how individual decisions and interactions influence student progress or behavior iii. When a lesson or strategy succeeds, they determine why iv. Seek ways to enrich the learning environment curriculum and their teaching strategies to facilitate participation and promote learning outcomes.	Teachers evaluate student progress and make changes as necessary
213.	i. Participate in a wide range of reflective practices to foster professional growth that leads to improvements in educating students with exceptional needs ii. Examine their own strengths and weaknesses and employ that knowledge in the analysis and planning of instruction iii. Distinguish themselves by their capacity for critical self-examination, their openness to innovation and their willingness to change to strengthen their teaching. iv. Depth of knowledge and skills v. Reflect on their biases and the influences these biases have on the instruction they provide to students	Teachers engage in reflective practices

	with exceptional needs and on their interactions with students or other professionals, families and the community	
214.	i. Vigorously pursue both independent and organized professional development opportunities. ii. Engage in advanced coursework and degrees iii. May travel to observe the practice of other accomplished teachers to keep abreast of useful new materials, teaching strategies and research iv. Interact with other professionals to self-reflect and self- renew v. Share their expertise with colleagues through conferences, workshops, professional development sessions, formal presentations, publications and informal exchanges vi. Keeping current in their field is essential for accomplished teachers as the profession continues to debate, rethink, reinvent and redefine a broad range of issues that have instructional implications for students with exceptional needs. vii. Build personal libraries of professional literature and engaging in personally reflective activities.	Teachers pursue professional growth focused on reflective practices
215.	a. Teachers know how students grow and develop b. Teachers are insightful observers of students c. Teachers recognize and capitalize on student's diversity, commonalities, and talents d. Teachers advocate for students	Standard 1-Knowledge of Students
216.		

	a. Teachers are effective advocates b. Teachers exemplify high ethical ideals	Standard 2- Knowledge of Philosophy, History and Law
217.	a. Teachers create environments in which equity, fairness and diversity are modeled, taught and practiced. b. Teacher respect the diversity of families c. Teachers ensure access to quality learning experiences	Standard 3- Diversity
218.	a. Teacher gain insight about students through partnerships with families b. Teachers collaborate with families to support students' education c. Teachers serves as links in family resource networks	Standard 4- Family Partnerships
219.	a. Teachers use diverse assessment methods for a variety of purposes b. Teachers collaborate in the assessment process	Standard 5- Assessment
220.	a. Teachers understand language acquisition and development b. Teachers use unique strategies to develop communication skills c. Teachers collaborate with general educators, related service providers, and others to facilitate student language development	Standard 6- Communication
221.	a. Teachers teach and foster skills b. Teachers develop students self-confidence and self-determination c. Teachers encourage the development of social and	Standard 7- Social Development and Behavior

	ethical principles d. Teachers foster and support positive behavior e. Teachers maintain safe and secure environments for all students	
222.	Teachers are grounded in the academic core curriculum a. Teachers expand the core curriculum to ensure the success of students with exceptional needs b. Student Transitions and Career Development c. Teachers differentiate instruction based on students' strengths and Needs Teachers expand the core curriculum to ensure the success of students with exceptional needs d. Importance of social interaction	Standard 8- Curriculum and Instruction
223.	a. Teachers establish safe and positive learning environments b. Teachers value and support equity, fairness and student effort	Standard 9- Learning Environment
224.	a. Teachers manage time and human resources productively b. Teachers select appropriate materials c. Teachers partner with colleagues, families, and the community as important resources	Standard 10- Instructional Resources
225.	a. Teachers participate in the profession b. Teachers contribute to the advancement of education policy and the profession	Standard 11- Contributing to the Profession and to Education through Collaboration

226.	a. Teachers evaluate student progress and make changes as necessary c. Teachers engage in reflective practices d. Teachers pursue professional growth focused on reflective practices	Standard 12- Reflective Practice
227.	1. A fifth-grade student with a severe bilateral hearing loss primarily uses American Sign Language (ASL) to communicate and attends a general education class with an educational interpreter. Which of the following statements best reflects the language learning theory proposed by Jim Cummins describing Basic Interpersonal Communication Skills (BICS) and Cognitive Academic Language Proficiency (CALP) as it relates to the student's language development? A. Indirect access to communication may restrict the student's access to social language and development of BICS. B. Receptive and expressive language proficiency related to BICS is universally acquired and most closely linked to the student's chronological age. C. The transfer of BICS will likely not occur between the student's primary language in ASL and developing understanding of English. D. The BICS language acquisition process is often delayed in bilingual learning environments.	a
228.	2. Under the Individuals with Disabilities Education Improvement Act (IDEA 2004), a manifest determination review is required when a student who receives	b

special education services violates student conduct codes and is facing the possibility of:
A. a one-day suspension.
B. expulsion from the student's current school.
C. a functional behavior analysis.
D. loss of classroom privileges.

229. 3. A teacher of the deaf and hard of hearing provides consultation to a sixth-grade general education social studies teacher, whose class includes a student with a profound hearing loss who uses an educational interpreter. The teacher of the deaf and hard of hearing frequently observes the social studies teacher's teaching practices and provides feedback to prevent modified or lowered educational expectations for the student. Which of the following observations by the teacher of the deaf and hard of hearing would be most important to discuss with the social studies teacher to address this goal? d

A. The teacher asks the interpreter to gauge the student's understanding of a concept.
B. The teacher provides the student with graphic supports when reading complex texts.
C. The teacher previews key topics with the student prior to introducing a new unit.
D. The teacher uses restricted vocabulary when interacting with the student.

230. 4. A teacher of the deaf and hard of hearing teaches a fifth-grade science class at a school for the deaf in c

which American Sign Language (ASL) is the primary mode of instruction. When presenting a complex text, the teacher uses a code-switching technique, in which the teacher directly links signs and their fingerspelling to key printed vocabulary. This ASL/English bilingual practice primarily:

A. allows for simultaneous use of both languages during instruction.
B. supports students to monitor their comprehension of text using their dominant language.
C. emphasizes concept development in both languages at the word level.
D. enables students to access text content using a modified language.

231. 5. A teacher of the deaf and hard of hearing is designing a series of activities to promote a student's ability to detect differences in non-phonemic aspects of spoken language, such as pitch, stress, and prosody. These activities would best support the development of which of the following auditory processing skills? b

A. comprehending a speaker's use of unfamiliar speech patterns
B. discriminating between suprasegmentals in speech
C. localizing various sounds in the environment
D. detecting sound in the midst of competing background noise

232. c

6. Melissa, a ninth-grade student with a profound bilateral hearing loss, attends a general math club after school with an American Sign Language (ASL) interpreter. Melissa reports to Mr. Stillman, the teacher of the deaf and hard of hearing, that she sometimes experiences difficulty both following the interpreter and recording important graphics presented during club meetings. Which of the following would be most appropriate for Mr. Stillman to suggest to Melissa to promote self-advocacy skills in addressing this issue?

A. requesting that the math club teacher present academic language and content solely in verbal form
B. asking the interpreter to review with her the concepts discussed at the end of the meeting
C. requesting that the math club teacher provide meeting notes to her ahead of time
D. asking the interpreter to modify meeting content so that she has time to focus attention on written information

233. 7. A teacher of the deaf and hard of hearing is considering how to assess learning challenges exhibited by a new student who has a moderate-to-severe hearing loss. Which of the following practices represents the most effective application of assessment for identifying an appropriate intervention to meet this student's needs? a

A. choosing assessment strategies to ensure relevance to issues involved in the referral

B. administering a broad battery of formal and informal assessments to cover a wide range of concerns
C. eliciting anecdotal comments from school staff who work with the student to supplement other assessments
D. using the student's last formal end-of-year achievement assessments to ensure fair and objective evaluation

234. 8. A teacher of the deaf and hard of hearing co-teaches a sixth-grade social studies class that includes several students who are deaf or hard of hearing and who receive the services of an American Sign Language (ASL) interpreter. The teachers pose and discuss an open-ended question with the class. Before students are asked to write a short reflection response to the discussion, the class collaboratively crafts appropriate language stems, such as those shown below. The practice of using language stems primarily benefits students in: a

During discussion statement was made that_____
I agree/disagree with this statement because____

A. applying standard written forms of English grammar and syntax. B. discussing and developing abstract ideas and concepts. C. using written models to show the direct correspondence between English and ASL. D. enhancing receptive language of specific content-area vocabulary.

235. c

1. A 15-year-old student who has been blind since birth due to optic nerve hypoplasia attends general education classes, and receives services from her TVI in the resource room three times per week for 45 minutes. The student is a proficient braille reader and is currently working at grade level in all subjects. The TVI is preparing invitations for the student's annual Individualized Education Program (IEP) review. The following individuals are invited to the meeting: • The student's parents • The assistant principal • The TVI • The student's general education teacher • The orientation and mobility (O&M) specialist

Which of the following individuals should also be invited to the meeting to best ensure that the student's IEP meets her needs?

A. student/family advocate
B. school psychologist
C. vocational rehabilitation specialist
D. school braillist

236. 2. An eleventh-grade student who is congenitally blind due to microphthalmia attends high school where he is an honors student and participates in extracurricular activities. The student and his parents would like for him to transfer to a residential school for the blind for his senior year so that he can socialize with other students with visual impairments. The Individualized Education Program (IEP) team is meeting to consider this change in placement. Which of the following a

would be the best rationale for denying the change in placement and keeping the student in his current setting?

A. The change in placement would be a denial of free and appropriate public education (FAPE) because the setting is too restrictive to meet the student's needs.
B. The change in placement may result in a regression in orientation and mobility (O&M) skills learned in the current setting.
C. The change in placement would be a denial of FAPE because it violates the spirit of the National Agenda.
D. The change in placement may result in a decrease in skills related to self-determination and self-advocacy.

237. 3. A TVI is working with a third-grade student with low vision due to aphakia. The student has recently been prescribed a short focus monocular to assist in reading materials at a distance in the classroom. The student has learned to stabilize the monocular while sitting and standing, and can move the barrel of the scope to focus an image. Which of the following skills should the TVI teach next to ensure the student's optimal use of the device? a

A. locating an object without the scope, then spotting it through the scope to verify detail
B. determining eye dominance and optimal lighting conditions for use of the scope
C. using the scope to follow a slow-moving target, such as a bug crawling across the desk

D. shifting gaze from scope to paper and back to scope to facilitate note-taking

238. 4. Cassie is a second-grade student with a visual impairment. Cassie has a magnifier available for near tasks, but she uses it only on occasion as she is able to access grade-level print from a comfortable distance. Cassie's mother is also visually impaired and can only access print when enlarged on an electronic magnifier with print inch in size. Cassie struggles with reading, particularly reading fluency. Although steady progress is noted, it is less than what would be anticipated. In a conversation with the mother, the TVI learns that Cassie's mother views the books Cassie brings home for required nightly reading on her electronic magnifier and moves the book under the device's camera to track the lines of print while Cassie reads aloud. Which of the following options would best support Cassie's reading fluency in this situation? b

A. The TVI should provide instruction to Cassie in utilization of an electronic magnifier so that Cassie can read her material at home with this device.
B. The TVI should request that two copies of reading material be sent home so that the mother can access the materials and participate in the home reading activity.
C. The TVI should request that the student read material out loud to the mother without her needing to supervise the accuracy of the reading.

D. The TVI should request that extra time be arranged for reading during the school day rather than requiring this reading activity to be done at home.

239. 5. Julio is a beginning second-grade student with a visual impairment with corrected acuities measured at 20/100. Spanish is the primary language spoken in the home. Julio's family moved to the United States from Puerto Rico during the semester break of his kindergarten year. Julio is able to access most regular print as well as demonstrations on the board and overhead without accommodations. He effectively utilizes a monocular to access small print presented at a distance and has a magnifier for occasional use on near tasks. Several students in Julio's class speak both English and Spanish. Julio typically plays with these students and conversations among them are in Spanish. When his parents pick Julio up from school, he eagerly tells his parents about events from the day while conversing in Spanish. Classroom instruction is primarily in English. If students request clarity regarding vocabulary or concepts, limited explanations will be provided in Spanish. Julio's classroom teacher is concerned because Julio rarely speaks in class. He follows directions in English and shows consistent improvement in reading and writing in English. Julio is successful with most classroom assignments, indicating an understanding of the majority of classroom conversations. Julio excels at math calculation but is sometimes confused by word problems. Given that Julio's receptive language skills in English are more d

advanced than his expressive language skills, which of the following explanations would be most appropriate for the TVI to make to address the concerns of the classroom teacher?

A. Julio most likely has a disability in the area of speech/language. An evaluation should occur in English as that is the primary language of instruction.
B. Because of Julio's visual impairment, it would be anticipated that he would experience a delay in the acquisition of a new language. No further evaluations should be recommended.
C. Julio most likely has a disability in the area of cognitive processing. An evaluation should occur in Spanish as that is his primary language.
D. Receptive language skills typically develop before expressive skills. If expressive skills in Spanish are age appropriate, no further testing should be recommended.

240. 6. When a TVI is working with a young child with a visual impairment, the TVI carefully and continually structures instruction and the child's environment to introduce objects and activities the child may have been unable to access previously or was unaware of previously. This strategy is most likely to help the child acquire early literacy skills and concepts that may not have been developed through: b

A. phonological awareness.
B. incidental learning.

C. oral language development.
D. episodic learning.

241. 7. When selecting accommodations for reading assessments, which of the following accommodations would invalidate the purpose of determining competency in decoding? c

A. regular print with optical aids
B. braille text for tactile reading
C. text-to-speech software
D. large print with glasses

242. 8. A fifth-grade student in a general education classroom receives some pull-out supports in the areas of reading/language arts and math. The student has been identified as having severe learning disabilities in the areas of reading, writing, and math. She has very limited functional vision and is learning to read braille, but she is able to read uncontracted braille at a rate of 14 words per minute and her decoding and comprehension are tested at a beginning second-grade level for written material. She comprehends auditory information at a level commensurate with her peers. The student is able independently to access auditory books preloaded on a tablet computer and enjoys listening to recorded books. A regularly assigned activity is to take turns reading out loud to a small group. After she is provided with an uncontracted braille version of the text, which of the following accommodations would reinforce the student's reading d

skills when it is her turn to read aloud?

A. requiring the student to read only a fraction of the material out loud as is required of the other students
B. allowing the student to utilize the tablet to listen to the book and then letting her use the tablet to read aloud the portion of the text she is assigned
C. requiring the student to read the same amount of material out loud as is required of the other students
D. allowing the student to utilize the tablet to listen to the book and then letting her read a reduced amount of material from the braille version of the text

243. 1. A third-grade teacher of students who are gifted structures the classroom in a way so that individual students have a variety of choices throughout the school day regarding working with others or alone. Which of the following statements best supports this classroom structure? a

A. Gifted students may be more comfortable learning in particular ways and settings.
B. Gifted students often lack the ability to make appropriate choices in classroom settings.
C. Experienced teachers allow gifted students to make informed choices about their education.
D. Individual choice for gifted students is important because it promotes self-esteem.

244. 2. A 15-year-old student who is gifted participates in extracurricular activities at the local high school and is enrolled in four classes at the local college. Accord- c

ing to the Family Educational Rights and Privacy Act (FERPA), who is allowed to review her college academic records?

A. The student and her parents are both permitted to examine her college records after signing a confidentiality agreement.
B. The student and her parents are both permitted to examine her college records with advanced written notice to the registrar.
C. The student has the right to examine her own records but must provide written permission for her parents to examine them.
D. The student is a minor and under the age of 18, so her parents must provide written permission for her to examine her college records.

245. 3. In order to provide the most culturally responsive and challenging programs and services, schools should most appropriately include which of the following characteristics? b

A. a single-entry qualification point into the gifted program
B. enriched instruction with underperforming, high-ability students designed to enhance skills
C. increased remediation opportunities for underperforming, high-ability students for maximum improvement
D. ongoing professional development training for teachers of students who are gifted

246. 4. An elementary teacher of students who are gifted and talented has many parents/guardians who want to be involved in the classroom. These parents/guardians constantly want feedback, want to know what is happening in the classroom, ask to come into the class, and hold high expectations for their child and the teacher. Which of the following is the best way for the teacher to address the needs of these parents/guardians? d

A. telling the students that concerned parents/guardians can call the teacher at any time
B. doing nothing differently from previous years in regard to communication or collaboration between the teacher and the parents/guardians
C. holding a curriculum night to communicate expectations to parents/guardians and asking them to let the teacher do his or her job without interference
D. using this parent/guardian motivation as a means to collaborate with them and inviting parents/guardians to be a part of the classroom

247. 5. Several students in the gifted and talented program at an elementary school are English language learners. These students have various proficiency levels in English and receive English as a New Language (ENL) services two to three times a week. The gifted education teacher regularly meets with the ENL teacher to review lesson plans and supports for these students. Which of the following additional actions by the gifted education teacher would best facilitate the continued c

development of the English language learners' English language proficiency?

A. conducting observations of the ENL teacher providing language instruction to the students
B. inviting the ENL teacher to observe the students' interactions and language use during content instruction
C. working with the ENL teacher to incorporate students' language objectives into content instruction
D. asking the ENL teacher to provide several lesson plans each week that focus on students' language learning

248. 6. Students in the gifted and talented program at a middle school meet for one period a day with the gifted education teacher. This class of students includes sixth-, seventh-, and eighth-grade students. The gifted education teacher has had some concerns about an apparent increase in conflicts between students. To address this concern, the teacher, with the principal's approval, decides to implement a peer mediation program. The students are formally trained in the processes of negotiation and mediation and participate in role-plays to practice these processes. Two students serve as peer mediators for the class on a weekly, rotating basis. Which of the following statements describes the best rationale for implementing this program? d

A. Students' recognition of behaviors that cause prob-

lem situations will be enhanced.
B. Disciplinary actions stemming from disputes or disagreements between students will decrease significantly.
C. The time that can be devoted to instruction and student learning will be maximized.
D. Students will be empowered with the tools for resolving problems constructively within a solution-oriented structure.

249. 7. A fourth-grade gifted student consistently receives failing grades in subject-area exams despite seeming to understand the material in class. When asked, the student explains that schoolwork is boring. Which of the following accommodations would be most appropriate for determining mastery? c

A. an alternative testing environment
B. extended time for assessments
C. choice in types of assessments
D. multiple tests of the same material

250. 8. A 12-year-old student who is highly gifted has been accelerated for two years and will be entering high school in the fall. The student is mature and possesses a high level of self-confidence. Currently, the student is the captain of the middle school baseball team and a starter on the basketball team. The student has expressed concerns about being physically smaller than high school classmates and participating in athletics. Which of the following strategies is likely to be most a

effective in fostering a positive transition for the student?

A. creating an arrangement that allows the student to participate in middle school athletics while pursuing high school-level academics
B. advising the student to forego participation in the high school athletic program in favor of a personal fitness program
C. suggesting that the student be allowed to participate in high school athletics in the role of team and/or equipment manager
D. having middle school coaches provide the student with individualized training to maximize his ability to participate in high school athletics

251. 1. A child who can make decisions about food choices, toy preferences, and clothing selections and can learn to regulate body functions is in which of Erik Erikson's stages of psychosocial development? b

A. trust vs. mistrust
B. autonomy vs. shame and doubt
C. initiative vs. guilt
D. industry vs. inferiority

252. 2. A teacher of preschoolers with developmental delays takes the children to the playground every day followed by structured indoor time in centers. After playing, the children come back to the classroom distracted, tired, and irritable. Which of the following strategies could the teacher use to help the children a

focus on center activities?

A. providing a short group activity such as singing a ''get ready for center'' song
B. practicing a classroom behavior plan
C. giving children a schedule of center activities when they come inside
D. making sure all children wash their hands after playing outside

253. 3. A teacher of students with exceptional needs and a general education teacher co-teach a third-grade class in which the majority of students are multilingual and have a home language other than English. Several of the students are classified as having language-based learning disabilities. The teachers use a sheltered English instruction model when teaching. When using this model, a primary responsibility of the teachers is: d

A. integrating various supports, including special education instruction and speech-language therapy, into their teaching.
B. arranging for students to receive instruction in small groups depending on their language proficiency.
C. modifying each student's academic content objectives according to his or her individualized language level.
D. designing lessons that address grade-level curricu-

lar achievement and concurrently promote language development.

254. 4. A teacher of students with exceptional needs teaches a kindergarten class that includes several students with sensory-processing difficulties who exhibit self-stimulatory behaviors. When designing an effective learning environment for the students, it is most important to understand that selfstimulatory behaviors: a

A. serve a purpose for the student and should be replaced with alternative behaviors that perform a similar function.
B. are inherently biological and are not readily influenced by outside reinforcement systems.
C. promote attention by the student and rarely interfere in his or her learning or educational performance.
D. are typically extinguished when the student is taught effective communication strategies to express emotions.

255. 5. A three-year-old child with a language delay is having difficulty mastering an IEP objective that addresses increasing the mean length of utterances. The teacher has joined the child during block play to participate in floor time in an effort to increase the likelihood that the child will increase the number of words used during play. Which of the following scenarios would be most likely to increase the child's number of c

words when the child and teacher play together?

A. When the child picks up a car and says "C" for "car," the teacher responds, "Vroom, vroom."
B. When the child picks up a car and says "C" for "car," the teacher responds, "Car."
C. When the teacher hands the child a car and the child says "C" for "car," the teacher responds, "Red car."
D. When the teacher hands the child a car and says "Car," the child responds, "Car."

256. 6. A preschooler with an IEP for developmental delays is being served in an inclusive early childhood setting. The teacher has noted that the child becomes agitated and refuses to clean up toys when prompted to transition to a new activity. The child's behavior becomes aggressive 75% of the times the child is asked to clean up toys. Which of the following accommodations would be most helpful in assisting this child to successfully transition between activities? d

A. interviewing the child's parents/guardians to learn if the child follows through with expectations to clean up at home
B. appointing classmates to assist with cleaning up toys, providing the child with positive role models of the expected behavior
C. posting a visual reminder of the classroom rules and reviewing the rules with the whole class daily
D. using a timer with the child that counts down how much time remains until it is time for a transition

257. 7. A kindergarten student who receives special education services for a developmental delay in the areas of communication and cognitive development attends a general education class with pull-out services from a teacher of students with exceptional needs. The teacher of students with exceptional needs meets with the kindergarten teacher and educational aide to consider ways to support the student's access to the general education curriculum. The teacher of students with exceptional needs recommends the following instructional accommodations. C

1. Use strong phrase boundaries when presenting verbal information
2. Repeat complex sentences using simplified syntax
3. Scaffold important vocabulary using visual examples

The instructional accommodations primarily support the student by:

A. offering exposure to fluent models of spoken language.
B. emphasizing the use of academic language structures.
C. making language more comprehensible.
D. providing concrete supports to abstract thinking.

258. 8. A kindergarten student with moderate cognitive impairments participates in an inclusive classroom setting. Which of the following activities is she likely to perform most like her nondisabled peers during a C

sequencing activity?

A. retelling the details of a story read during an earlier class period
B. putting together a model following picture directions
C. following classroom routines over an extended period of time
D. responding to multistep oral directives

259. 1. A student is being evaluated to see if he qualifies for special education services as a student with a specific learning disability. He has poor grades and has made little academic progress even with the prereferral interventions required before a recommendation for evaluation can be made. The student has passed hearing and vision screenings. The student's evaluation scores are listed in the table below. On the basis of this information, what will the eligibility team most likely determine? d

A. The student qualifies for services because achievement scores are significantly below average.
B. The student does not qualify for services because there is no severe discrepancy between achievement scores and the IQ score.
C. The student needs to complete different intervention programs during the prereferral stages because the student should have made some progress.
D. The student needs further evaluation because the student might have an intellectual disability.

260. 2. A three-year-old was recently placed in foster care after his mother passed away suddenly, and no family has been identified as next of kin. The child was born with spina bifida and a number of comorbid orthopedic needs. He is transitioning from early intervention services to a preschool special education program and an Individualized Education Program (IEP) is being developed. According to the Individuals with Disabilities Education Improvement Act (IDEA 2004, § 300.519), which of the following is the legal responsibility of the state education agency (SEA)? a

A. assigning an educational surrogate parent not more than 30 days after a public agency determines the child needs one
B. requesting information from a guardian ad litem regarding the court order of assignment of custody within 30 days
C. scheduling the IEP team meeting within 60 days of notice of the change in custody to determine the school assignment
D. providing all education-related documentation to the foster parent as required by court order within 60 days

261. 3. A ninth-grade student in an inclusive history class has a specific learning disability in reading. He is able to correctly decode words at a fifth-grade level; however, he can understand and respond to text at grade level when it is read aloud to him. When he is asked to read on his own, he is often off task or so frustrat- c

ed that he gives up. What accommodation will allow the student to access content-area textbooks and successfully complete coursework?

A. reading everything aloud to the student so that he does not get frustrated and stop working
B. finding a text that is written at a sixth-grade level so the student can practice his skills and be successful
C. using an audio version of the text so the student can listen at home or in class without losing the meaning of the content
D. allowing the student to work with another student to complete assignments that require excessive reading in class

262. 4. Use the information below to answer the question that follows. A large school district requires each teacher to set yearly personal and professional goals at the start of the school year and to monitor his or her progress. A middle school special education teacher's goals are outlined below. a

Personal: • Expand and refine my use of technology resources to collaborate with peers and parents/guardians, and access research and evidence-based practices.

Professional: • Contact each parent/guardian by phone or home visit to introduce myself and provide beginning of the year information, policies, and procedures. • Establish and maintain a consistent manner for families and students to communicate with me re-

garding their needs, concerns, or questions. • Provide families with timely information that includes topics such as special education policies, Individualized Education Program (IEP) development and goals, assessment and transition planning procedures from middle school to high school, and postsecondary planning.

Which of the following statements provides the primary rationale to support the special education teacher's professional goals?

A. Collaboration and communication with parents/guardians is more likely to result in positive educational outcomes for students.
B. Parents/guardians of students in middle school are more likely to respond to the school's homeschool involvement activities than parents/guardians of students in other grades.
C. Students with disabilities are more likely to receive related services and direct special education in the general education setting when parents/guardians attend IEP meetings.
D. The quality of students' teachers is a more important factor in the success of middle school students than parent/guardian involvement.

263. 5. A student with an Individualized Education Program (IEP) addressing mild language delays is having difficulty sequencing information from known stories. Following instruction on how to sequence a story by telling what happened first, what happened next, and b

what happened last, the teacher presents a variety of simple stories that require the student to read and place events in sequence. In spite of repeated instruction the student continues to struggle with the concept. The teacher reteaches the lesson by modeling and assigning the words first, next, and last to separate paragraphs. After the lesson, the student responds correctly. The student could have experienced challenges initially because he:

A. did not comprehend the story the first time it was read.
B. needed additional support to understand the concept.
C. preferred that the story have different elements and an alternate ending.
D. could not understand the story due to his attention-deficit/hyperactivity disorder (ADHD).

264. 6. The annual IEP review date is approaching for a ninth-grade student with a moderate cognitive delay. His teacher has started to talk to him about things to expect during an upcoming Individualized Education Program (IEP) team meeting, as well as role-playing the student's participation in the meeting. The teacher is also helping him make a set of visuals to share at the meeting. These visuals will most likely contain evidence of: b

A. growth data on goals from the expiring IEP.
B. activities and schoolwork of the year.

C. his self-reflective strengths and needs, wishes, and preferences.
D. place cards and notes for each member of the transition IEP team.

265. 7. A new student is transitioning from a developmental preschool to general education kindergarten with an Individualized Education Program (IEP) addressing behavior concerns related to a history of violent outbursts, noncompliance, and self-injurious behaviors. Goal updates before transitioning show progress, with few outbursts being noted. The receiving general education teacher and special education teacher notice a marked increase in behavior issues within two weeks of attendance in the kindergarten program. The special education teacher will most likely: a

A. document behaviors while gathering the IEP team to consider a functional behavior assessment.
B. isolate the student and establish a system to earn time in the general education classroom.
C. continue the behavior program as the IEP designates and wait for the end of the transition period.
D. inform the principal that the student needs a self-contained program placement.

266. 8. A special education teacher created a three-part activity to pre-assess the readiness of first-grade students to tell time to the hour. The students were instructed to label an analog and digital clock face to a

show 6:00 and to write what they know about clocks and time. Which of the following questions is most important for the teacher to answer based on the pre-assessment information obtained?

A. What meaningful differences exist among the students' prior knowledge?
B. Should students be grouped heterogeneously or homogeneously?
C. How can I ensure that all students gain new learning at the same rate?
D. Do the learning styles of the students have an effect on these results?

267. 1. An 11-year-old sixth grader with autism spectrum disorder (ASD) and an intellectual disability is in a general education classroom for most of the day with support from a paraprofessional. At the beginning of the year, the special education teacher consults with the general education teacher on ways to ensure the student feels included in the classroom. The special education teacher suggests incorporating cooperative learning activities into various lessons in which the students take turns being the group's leader depending on the subject. Which of the following rationales best supports why this instructional strategy would be the most developmentally appropriate for the student? d

A. supporting the student's understanding of firm boundaries in a social setting

B. encouraging the student's exploration of creative abilities in different academic areas
C. providing the student control over the learning process
D. allowing the student the opportunity to feel accomplished among peers

268. 2. Morgan is 12 years old and has an intellectual disability and an emotional disability. She attends a separate classroom with a small group of similar-aged students, and she also attends a general education science class with support from a paraprofessional. During science class, Morgan has begun displaying inappropriate behaviors that have become increasingly violent. She has lunged at a classmate and twice she has tried to stab a paraprofessional with a pencil. After each offense Morgan's parents have been notified and she has been immediately picked up from school and taken home for the remainder of the day. Which of the following historical court cases determines how the school handles situations such as Morgan's? a

A. Honig v. Doe
B. Hendrick Hudson School v. Rowley
C. Smith v. Robinson
D. Mills v. Board of Education of the District of Columbia

269. 3. A special education supervisor is meeting with all the special education teachers in a diverse elementary school. The supervisor begins a discussion on ways b

to encourage and create culturally responsive learning environments by asking each teacher the following question: "What learning characteristics come to mind when you think of each student in your classes?" Which of the following research-based rationales is addressed by asking this type of question?

A. committing to knowing each student socially and emotionally increases academic success
B. recognizing the ways in which students' unique profile of strengths and needs can influence academic success
C. maintaining high expectations for everyone in the classroom encourages students to reach academic standards for success
D. understanding each student's individual life experiences influences his or her academic success

270. 4. A parent of a high school student is concerned about the student's academic performance, and preparations have been made to discuss this at the annual review of the student's Individualized Education Program (IEP). The meeting has been scheduled on a day and time convenient for the parent. At the appointed time, all the participants have arrived except the parent. The teacher calls the parent after 10 minutes, who states she is running late and will arrive within 30 minutes. In this situation, the most appropriate course of action for the teacher to take is to: b

A. cancel the meeting and reschedule so the parent can attend the meeting to have her concerns addressed.
B. excuse the participants until the parent arrives, then reconvene the meeting and discuss concerns.
C. continue with the meeting and discuss the concerns about the student with the IEP team participants who are present.
D. start the meeting, review the concerns that have already been addressed when the parent arrives, and then proceed.

271. 5. A student who is nonverbal receives instruction in a classroom for students with severe impairments. The student has emerging communication skills facilitated by an application on a digital device and is using the device to choose a preferred activity during unstructured activities. The teacher would like to expand the student's use of the device by including another category. The teacher is aware that the next category must be a preferred activity with immediate gratification. Which of the following categories would best meet the needs of this student? a

A. the food category, with symbols for the student's preferred food during snack time
B. the outdoor clothing category, with symbols allowing a choice of what to wear at recess
C. the feelings category to enable the student to express feelings

D. the friends category to enable the student to interact with a preferred peer

272. 6. A sixth-grade teacher notices that a student with severe disabilities is making limited progress on his hand-washing goal. The teacher observes that the paraprofessional uses the fewest prompts with a long wait time between prompts, and the occupational therapist starts with a physical prompt with a shorter wait time between prompts. As the teacher reviews the student's progress and observes the instruction he is receiving, which recommended practice for teaching students with severe disabilities should the teacher consider? C

A. collaborative teaming
B. active family involvement
C. systematic instruction
D. positive behavior intervention

273. 7. At the end of the school year, a preschool teacher is giving an informal assessment to a four-year-old child with multiple disabilities. The teacher wants to know if the child recognizes the numbers 1 through 10. The teacher presents number cards to the child one at a time, asking, "What number is this?" The child answers incorrectly by saying the name of a different number. Which accommodation should the teacher use to adapt the assessment? C

A. presenting a card to the child and asking, "Is this number___?"

B. presenting three number cards at a time and asking the child to point to a specific number
C. asking the child, "What number is this?" when walking in the school and pointing to the number
D. continuing with math questions such as rote count and count with correspondence to activate prior knowledge

274. 8. The purpose of the Summary of Performance (SOP) used in transition planning for high school students is to provide: — C

A. an overview of how a student performs specific job skills related to the Standard Occupational Classification (SOC) system.
B. a statement that guides Individualized Education Program (IEP) team decisions about whether transition planning should start at age 14 or age 16.
C. an overview of a student's academic and functional ability level to assist the student in transition beyond high school.
D. a statement about how successful a student will be in a full-time postsecondary training program.

275. _____is a condition in which you're missing the lens of one or both of your eyes. You can be born that way or lose the lens due to an injury. Or your doctor might remove it during an operation for cataracts. When you have aphakia, it's hard to see things clearly with the affected eye. — Aphakia

276. — Microphthalmia

	_____is an eye condition that happens before birth. In this condition, one or both eyeballs are abnormally small. In some individuals, the eyeball may appear to be completely missing; however, even in these cases some remaining eye tissue is generally present.	
277.	Vowels and consonants can be considered to be the segments of which speech is composed. Together they form syllables, which in turn make up utterances. Superimposed on the syllables there are other features that are known as _____. These include variations in stress (accent) and pitch (tone and intonation).	suprasegmentals
278.	Jim Cummins differentiate between social and academic language acquisition. _____are language skills needed in social situations. It is the day-to-day language needed to interact socially with other people.	Basic Interpersonal Communication Skills (BICS)
279.	_____ focuses on proficiency in academic language or language used in the classroom in the various content areas. Academic language is characterized by being abstract, context reduced, and specialized. In addition to acquiring the language, learners need to develop skills such as comparing, classifying, synthesizing, evaluating, and inferring when developing academic competence. It takes learners at least five years to develop CALP.	Cognitive Academic Language Proficiency (CALP)
280.	Standard I: Knowledge of Students Accomplished teachers of students with exceptional needs use their knowledge of human development and learning and	Foundations for Effective Practice

their skills as careful observers of students to help develop students' knowledge, aptitudes, skills, interests, aspirations, and values.

Standard II: Knowledge of Philosophy, History, and Law Accomplished teachers of students with exceptional needs understand how philosophical, historical, and legal foundations of their field inform the development of effective practice. They draw on this knowledge to organize and design appropriate practices and to ensure that students' rights are protected and respected.

Standard III: Diversity Accomplished teachers of students with exceptional needs create an environment in which equitable treatment, fairness, and respect for diversity are modeled, taught, and practiced by all, and they take steps to ensure access to quality learning opportunities for all students.

Standard IV: Family Partnerships Accomplished teachers of students with exceptional needs work collaboratively with parents, guardians, and other caregivers to promote understanding of the student and to achieve educational goals.

281. Standard V: Assessment Accomplished teachers of students with exceptional needs design, select, and use a variety of assessments to obtain accurate, useful, and timely information about student learning and development and to help students reflect on their own progress.

Student Learning and Development

Standard VI: Communication Accomplished teachers recognize the critical nature of communication for students with exceptional needs. They develop and foster communication skills that enable students to access, comprehend, and apply information; acquire knowledge; and develop and maintain interpersonal relationships.

Standard VII: Social Development and Behavior Accomplished teachers of students with exceptional needs cultivate a sense of efficacy in their students as they develop each student's personal responsibility and independence, civic and social responsibility, respect for diverse individuals and groups, and ability to work constructively and collaboratively with others.

Standard VIII: Curriculum and Instruction Accomplished teachers command a core body of knowledge of the disciplines and of specialized curriculum for students with exceptional needs. They draw on this knowledge to establish curricular goals, design instruction, facilitate student learning, and assess student progress.

Standard IX: Learning Environment Accomplished teachers of students with exceptional needs establish a caring, stimulating, and safe community for learning in which democratic values are fostered and students assume responsibility for learning, show willingness to take intellectual risks, develop self-confidence, and

	learn to work independently and collaboratively. Standard X: Instructional Resources Accomplished teachers of students with exceptional needs select, adapt, create, and use rich, unique, and varied resources, both human and material, to promote individual student learning.	
282.	Standard XI: Contributing to the Profession and to Education through Collaboration Accomplished teachers provide leadership through collaboration to improve teaching and learning for students with exceptional needs and to advance knowledge, policy, and practice. Standard XII: Reflective Practice Accomplished teachers of students with exceptional needs regularly analyze, evaluate, and synthesize their practice to strengthen its quality	Roles and Practices in the Learning Community
